

*** **Wide Adaptation** *** **High Yielding** *** **Endophyte-Free** ***

Cajun II is a forage-type endophyte-free tall fescue that promises broad adaptation and high yields. **Cajun II** was developed primarily out of selections from Cajun, Martin, and Mozark.

Wide Adaptation

This special crossing of “European-type” and “Mediterranean-type” fescues extends **Cajun II**'s range of adaptation and provides it with a wider range of ability to tolerate both the heat and the cold, performing very well both in the Northern and Southern tall fescue zones.

High Yielding, Early Maturing

Cajun II's has also been bred to be a high yielder. This is especially noticeable with earlier growth in the spring and extended production in the fall. **Cajun II** is approximately 11 days earlier than Kentucky 31.

Endophyte-Free, Horse Safe

Cajun II is endophyte-free, meaning it is safe for all livestock including horses.

Ongoing Evaluations

Cajun II has been tested in Kentucky, Pennsylvania, and North Carolina. It is currently in trials at Knoxville, TN. **Cajun II** has also been tested under the experimental name **FTF 9077**
