

“Beautiful Turf - Even when the elements of nature are against you!”

Hudson is a selection out of germplasm which included established turf plots where plants were exhibiting “superior turf quality during the hot humid summer months when the heat stress, brown patch and pythium diseases were the most severe.” This selection process has created a variety that’s “Beautifully Strong!”

SELECTED FOR BATTLE

Hudson offers excellent turf quality, dark green color, great sod strength, disease resistance, and better ability to tolerate shade, drought, and saline soils.

VERY WIDE ADAPATATION

Independent data from around the country shows **Hudson** to be very suitable to many climates and multiple applications.

BEAUTIFUL DARK GREEN

Hudson’s rich dark green color is a benefit to any lawn. With it is natural deep green color, lawns look better, even into the late fall, and when limited nutrients are used.
